## ABSTRACT

This paper has been typeset from a T<sub>E</sub>X/L<sup>A</sup>T<sub>E</sub>X file prepared by the author.

**Figure 1.** A color-magnitude plot, reproducing the results of (Sesar et al. 2010), Fig.23. We show here only NCSA-processed sources, which is why certain RA ranges are omitted or have less sources. We only select sources with `extendedness=0` parameter (stars). The scale is showing the  $\log_{10}$  of count. All sources have their colors corrected for extinction. On first two panels the features of Sagittarius Stream are clearly visible.
